

A Trip to the Dunes

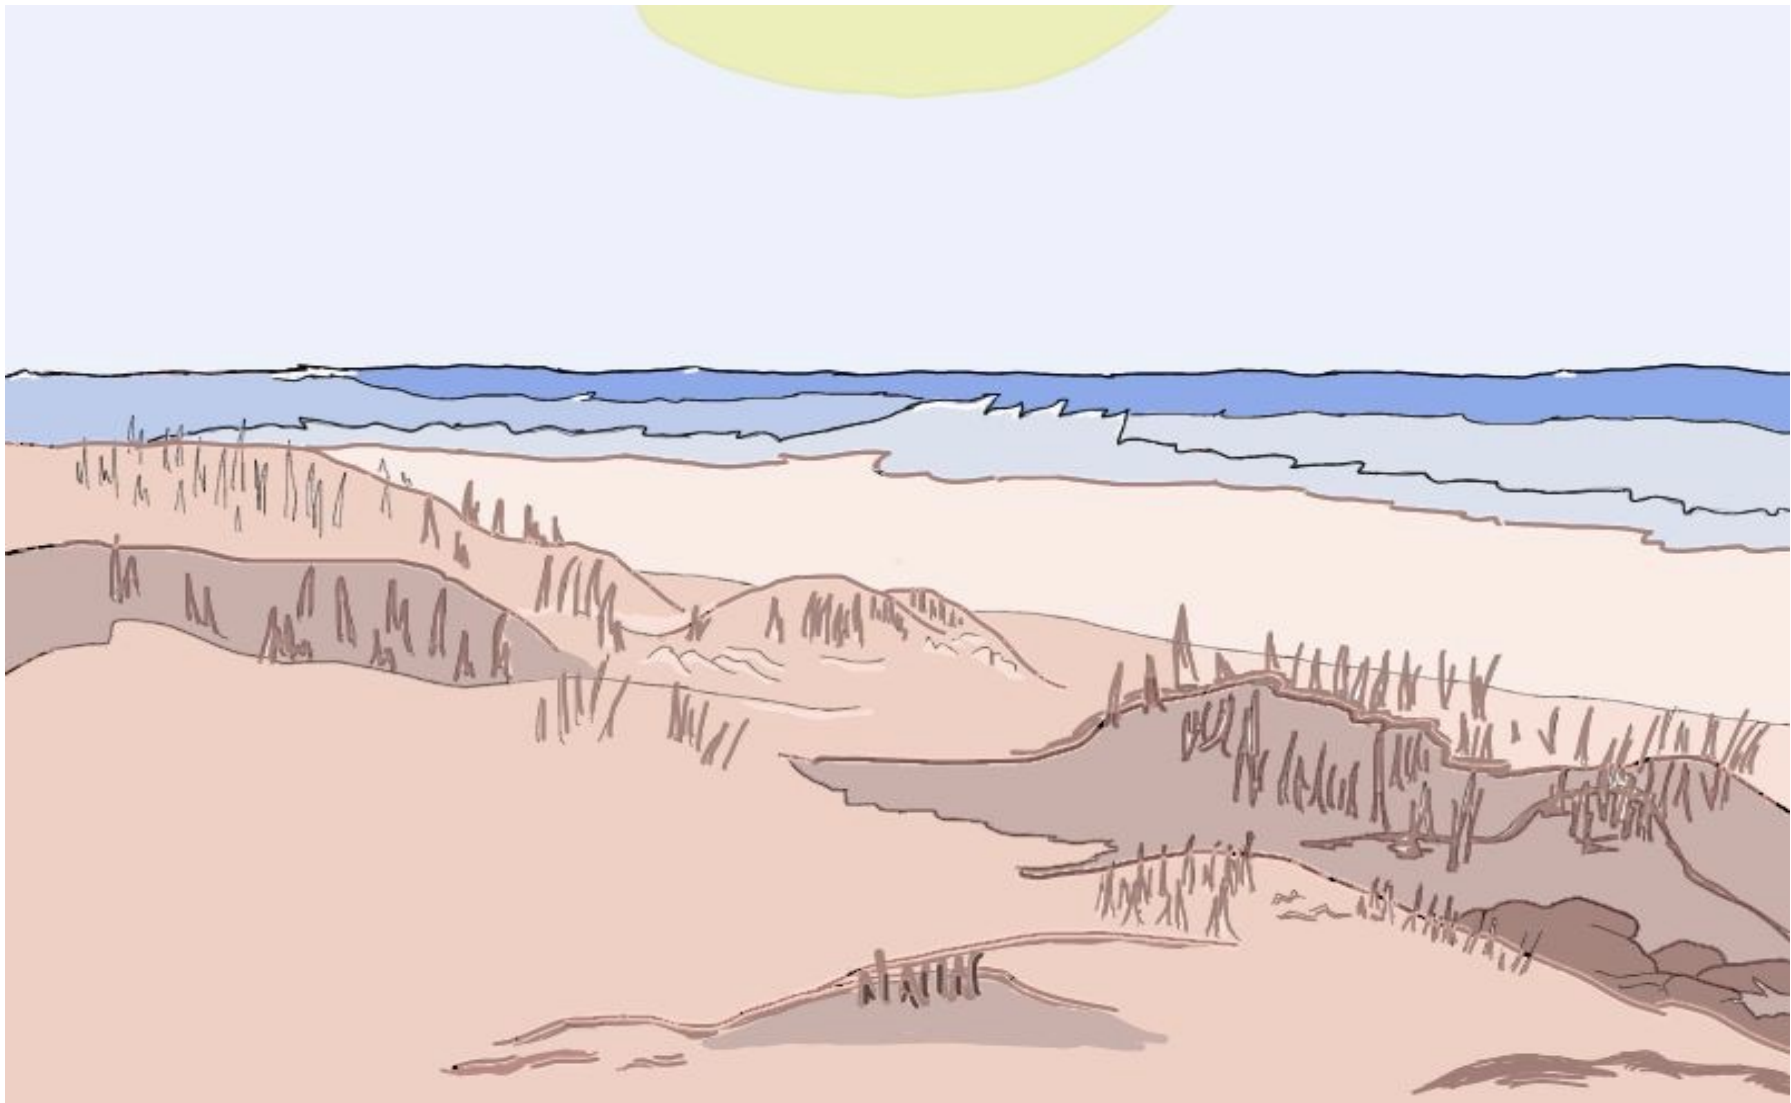

By Teresa Taylor

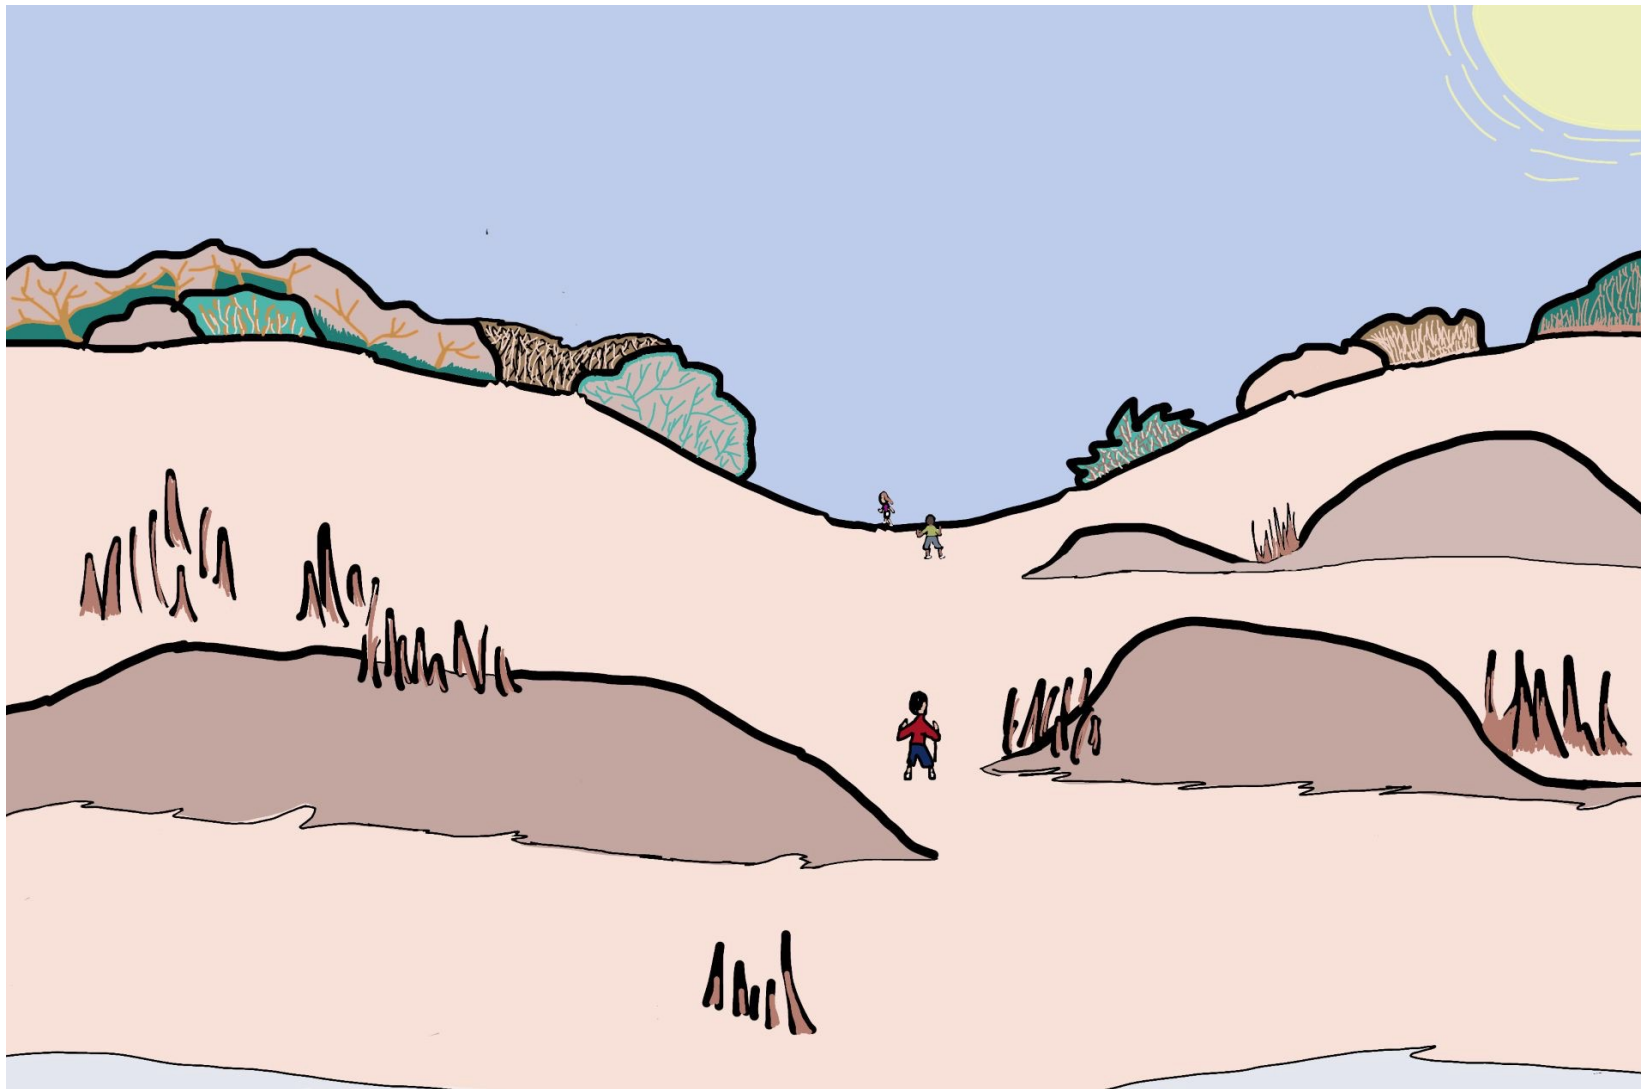

Our music group will go on a trip in June.

We will do a few new things.

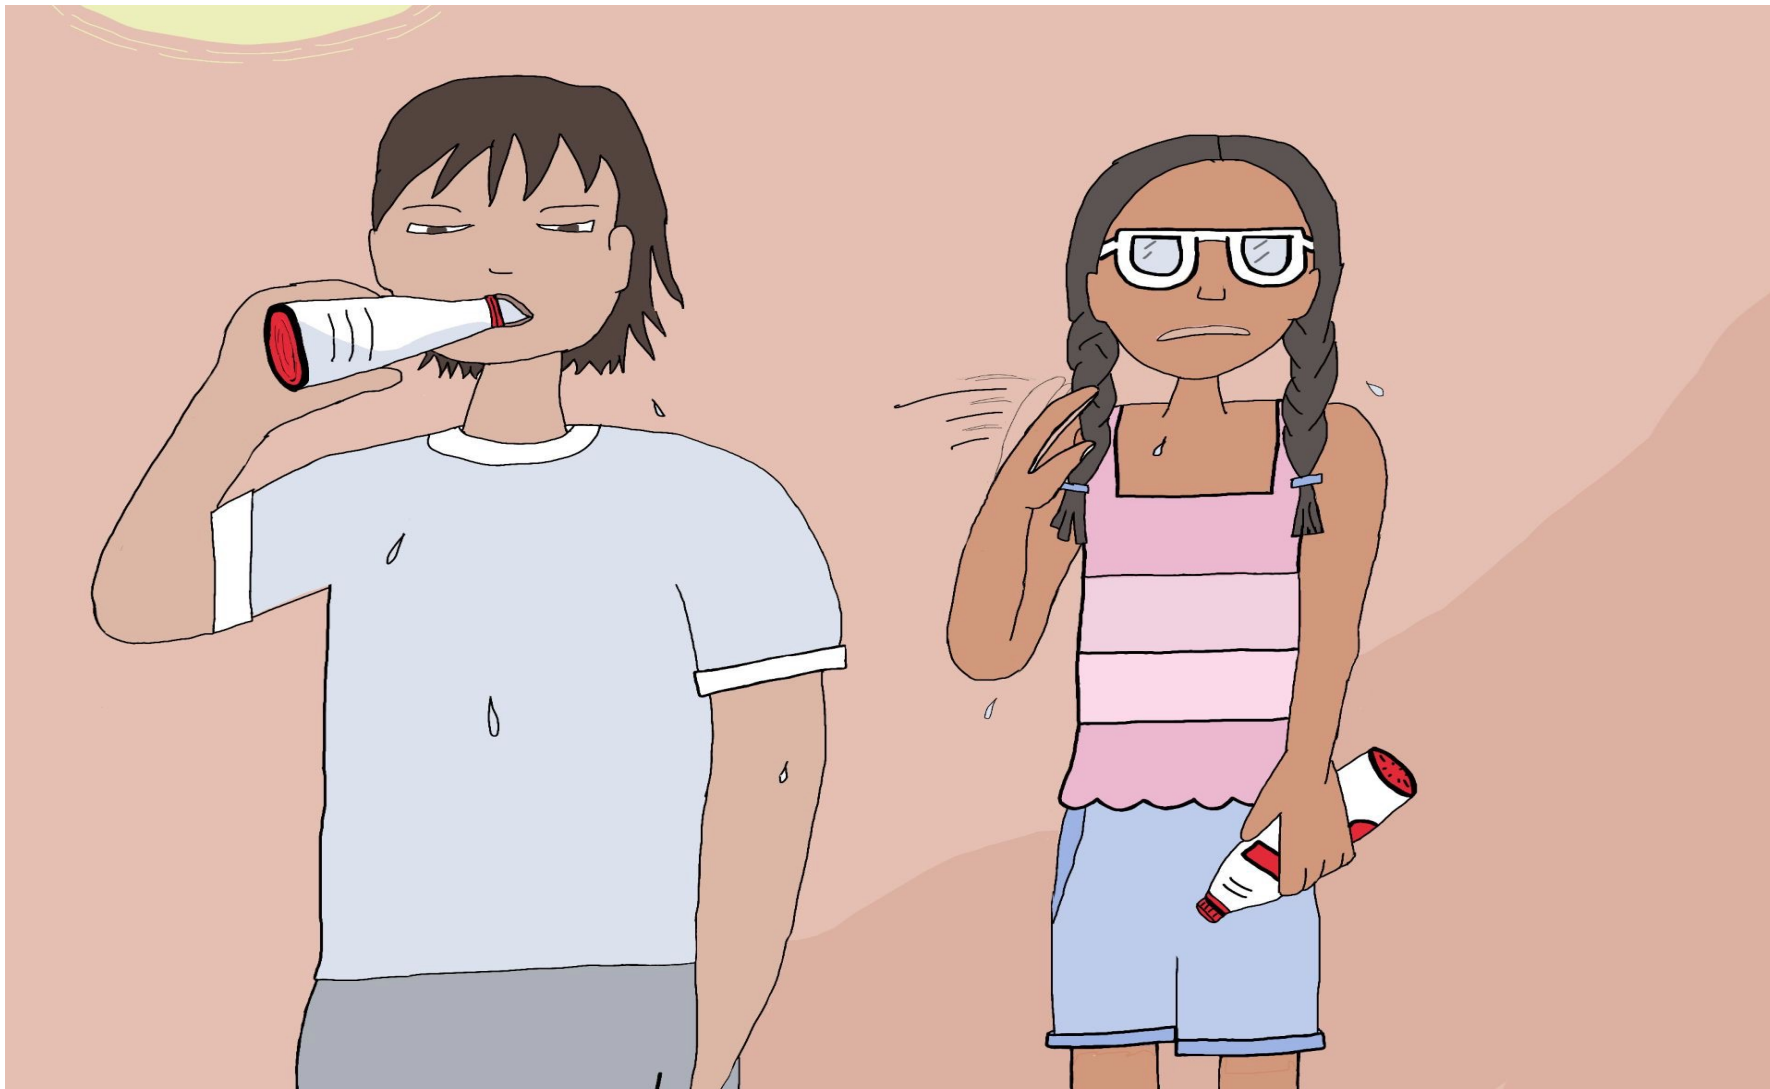

The bus will stop and let us off to see the sand dunes.

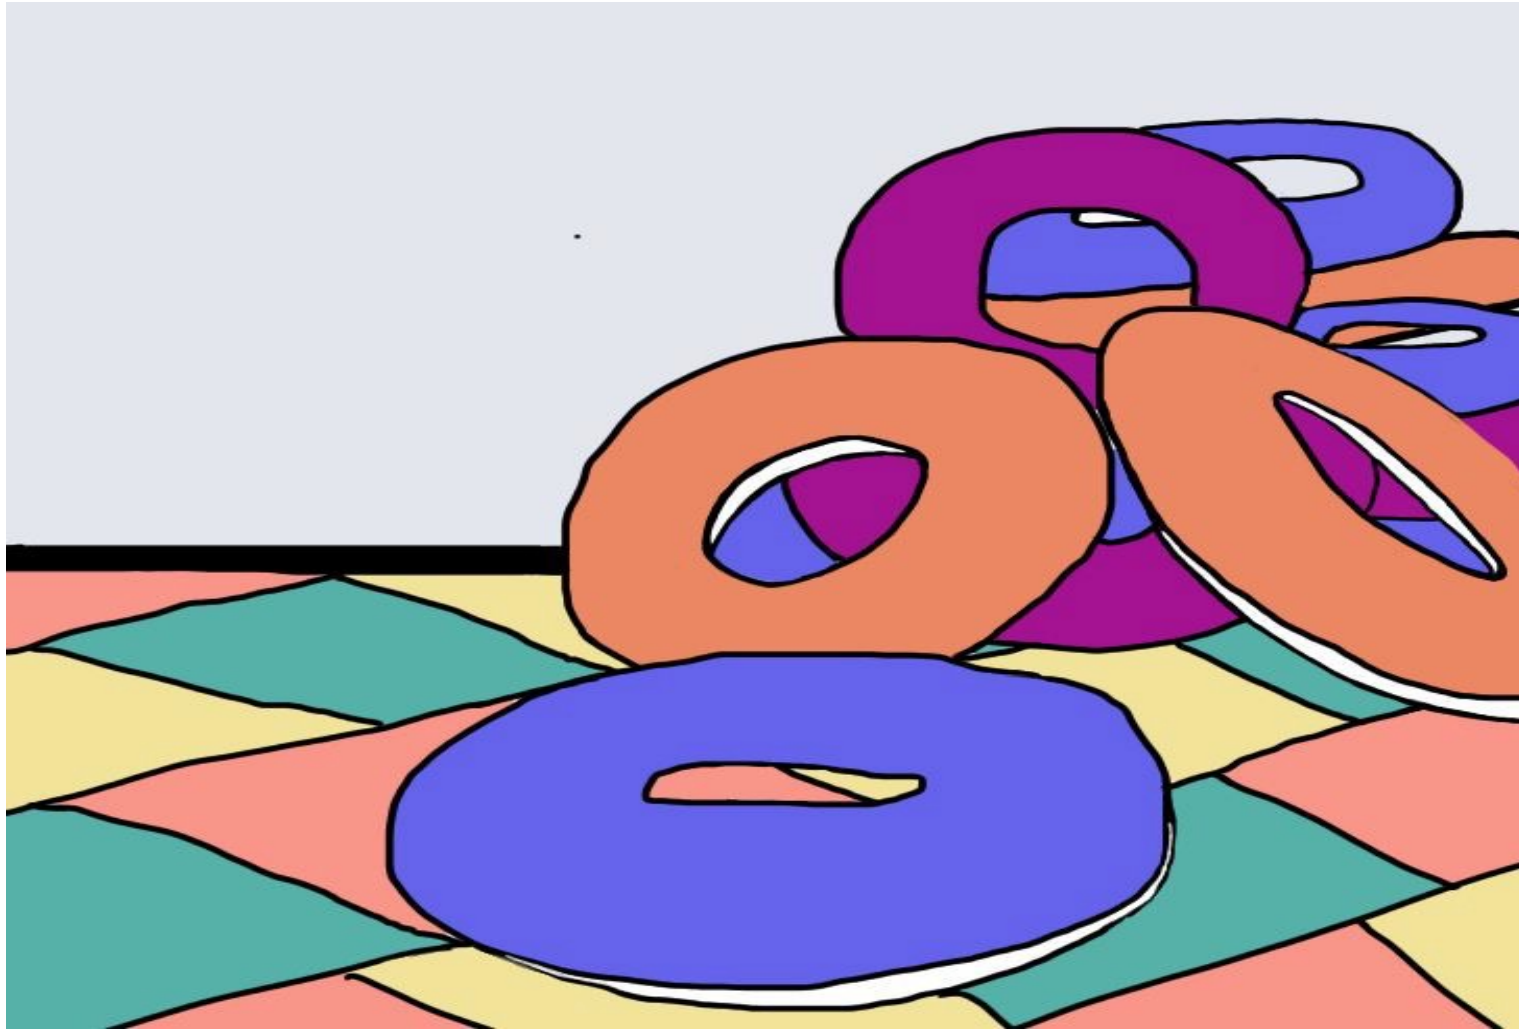

Our crew will hike up the huge dunes.

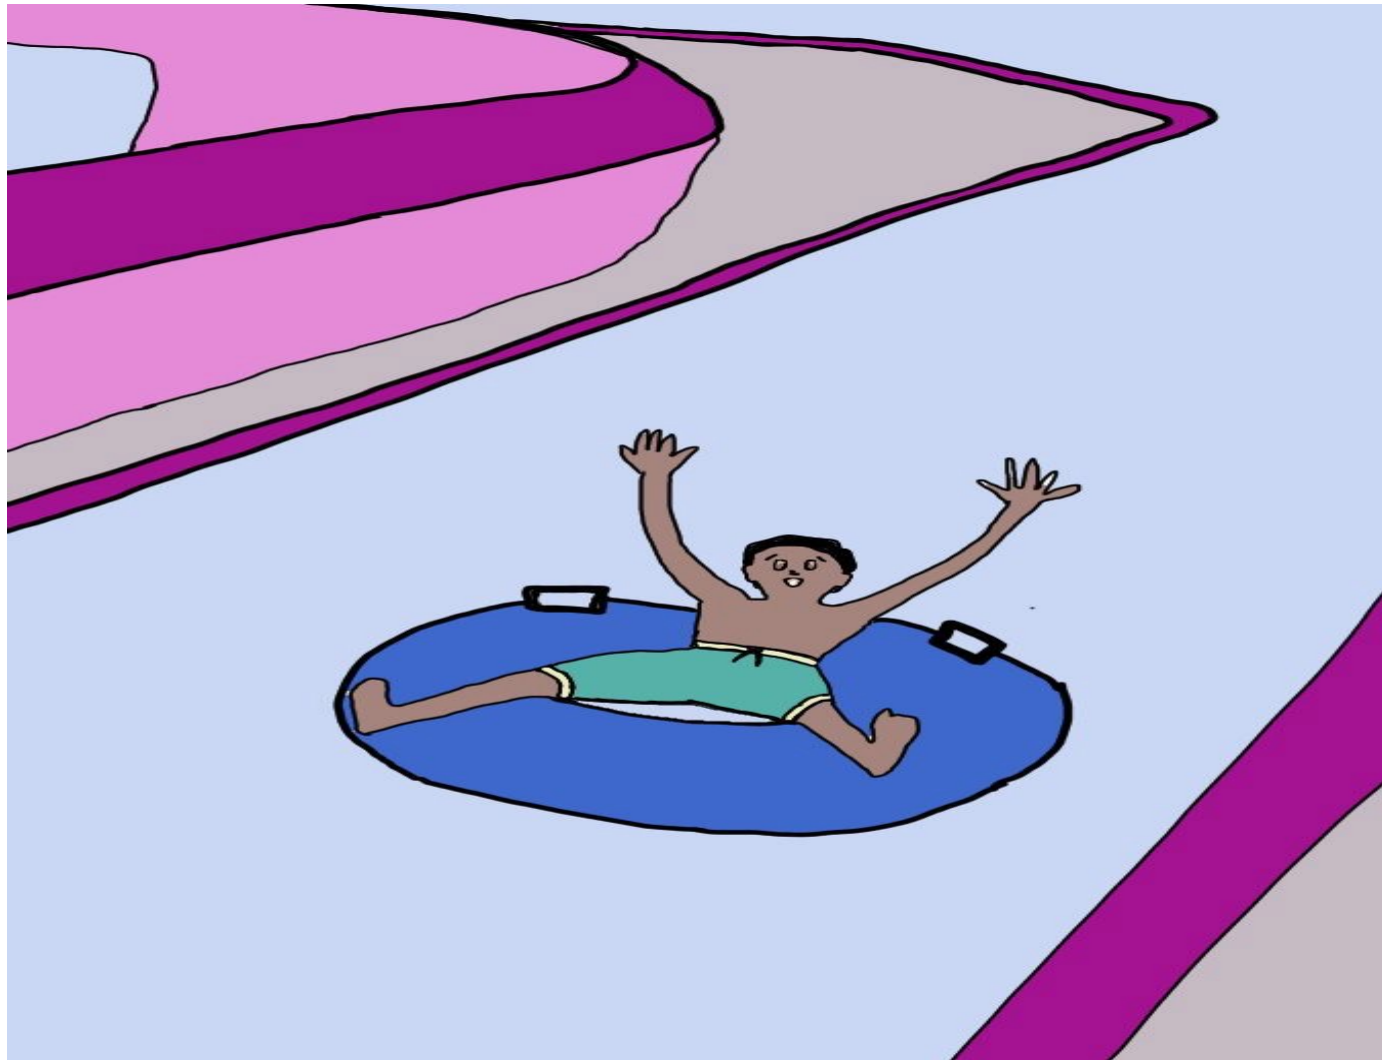

The sand is smooth where the wind blew and blew.

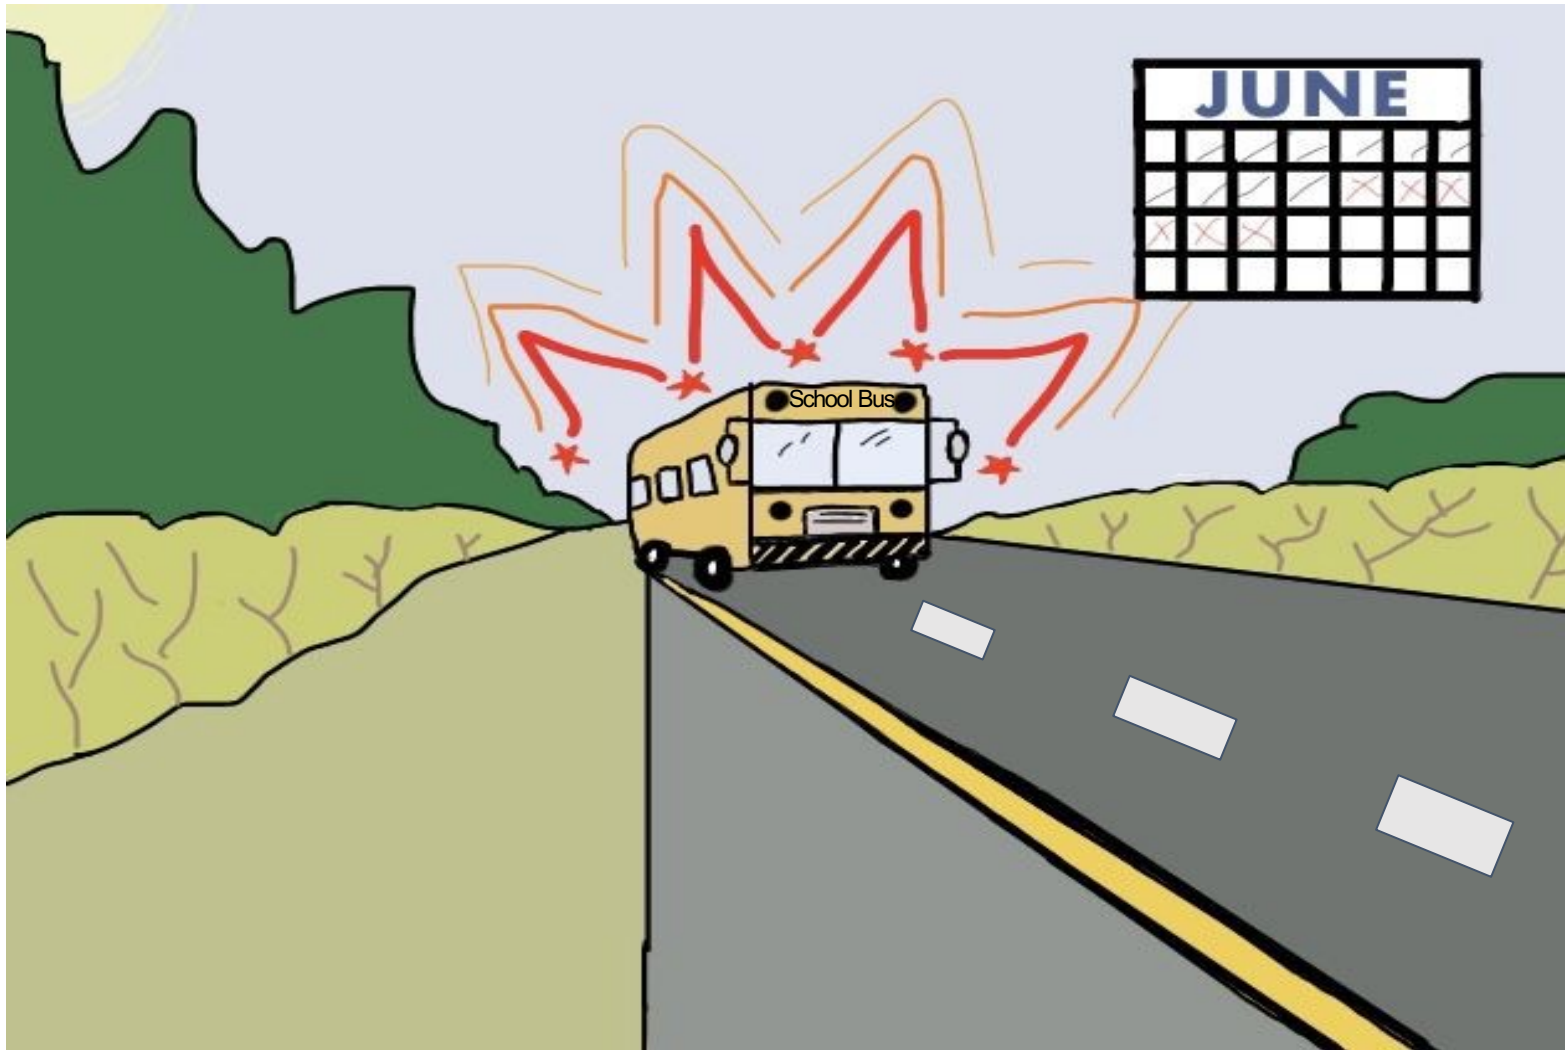

It will be hot at noon. We will be in the mood to cool off.

We will go to the pool. Everyone in the group will use a tube.

I will float through the pool chute on my blue tube.

Our group will have a cool trip in June.

Fun facts about sand dunes!

- *A dune is a hill of sand formed by wind blowing in the same direction for a long period of time.
- *The sand dunes along the North Carolina coast can be as high as 10 - 25 feet.
- *Some sand dunes are man-made. They are formed when fencing and grass are placed along the shore.
- *Dunes can help limit erosion and protect homes and towns from the ocean waves and the wash-over from storms.
- *Dunes can also be found in the desert or anywhere that wind continuously blows sand in the same direction.
